Clermont-Ferrand, October 30th

As one of the three co-organizer of the IBISCA-Panama project, I would like to emphasize my great interest in actively participating to the IBISCA-CTRL (« Census of Tropical Rainforest Life ») project which will allow to carry on large scale studies of the terrestrial biodiversity.

As President of the french NGO « Opération Canopée » and scientific head of the « Canopy Raft » and « Canopy Glider » programs, I am co-organizer of the next scientific expeditions that are planned next year in Australia (BATH project) and in Vanuatu (SANTO project) and that will share this « IBISCA spirit ».

Moreover, I would like to certify that Blaise Pascal University has always supported my activities since I am involved in canopy science with the « Canopy raft » and in large scale biodiversity researches.

To whom it may concern.

Dr Bruno Corbara

OPÉRATION CANOPÉE
